

Now made in the USA

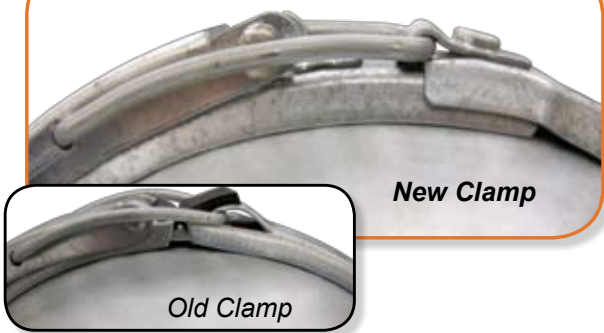

The **BEST** just got **BETTER**

New and Improved Quick-Seal Clamps

Since 1986, the Nordfab Quick-Fit clamp has been the world's *best selling* and *best sealing* duct clamp. It has set the standard for use in industrial dust, mist, smoke and fume collection. Many have tried to imitate it, but we've found none who have ever matched, or improved upon, its tight, leak-resistant seal. Until now!

The overlap of the Quick-Seal clamp bridges the gap

The NEW Nordfab Quick-Seal clamp uses our new revolutionary "overlap" design. This overlap ensures the tightest seal possible.

We developed the Quick-Seal clamp to meet the needs of 21st century manufacturing. With the high cost of electricity, a tighter sealing clamp means greater energy efficiency and that savings is multiplied for each clamp you use. Over the lifetime of a ducting system, your savings can be dramatic.

Better Seal, Easier to Handle

Additionally, we have lengthened the Quick-Seal handle and made it stronger, giving you more leverage to clamp down for super tight seals.

In mist systems, our Quick-Seal clamp can also be used in conjunction with the Nordfab Mist Solution to provide the tightest seal possible.

Due to the super-tight fit of the Quick-Seal clamp, Q-F is appropriate for low pressure positive transfer systems

The New Quick-Seal handle is longer, stronger and provides a better grip

Nordfab Ducting will be delivering Quick-Seal clamps in 2009 and they will be phased in as inventories of original Q-F clamps are depleted.
